Forthcoming Meeting / CIB Co-Sponsored Event

The CRIOCM2006 International Symposium on “Advancement of Construction Management and Real Estate”

3 – 5 November 2006, Beijing, China PR

by

The Chinese Research Institute of Construction Management and North China Electric Power University, P. R. China

Introduction

The Chinese Research Institute of Construction Management (CRIOCM) and North China Electric Power University are pleased to announce that they are jointly organizing the CRIOCM2006 International Symposium entitled “Advancement of Construction Management and Real Estate” from 3 to 5 November, 2006 in North China Electric Power University. This Conference will be hosted by School of Business Administration of North China Electric Power University.

The Chinese Research Institute of Construction Management (CRIOCM) has been undertaking research and academic activities in the fields of construction management (including regional development planning, construction project planning, construction design & build, real estate management, property management and management system of construction project) for 10 years. The CRIOCM’s annual international symposium on “Advancement of Construction Management and Real Estate” offers an important academic forum for academics and professionals to exchange latest developments of research and management practice.

North China Electric Power University is a famous university in China which is located in the Changping District of Beijing and is situated between the Great Wall to the north, the village of Olympics to the south, and Beijing Aerospace City to the west. The University campus has pleasant grounds and is secluded, and thus is an ideal place to meet for the CRIOCM2006 International Symposium.

Beijing, the capital of China, is the Chinese political, economical and cultural center. The world-wide well-known capital city has a history of over 3000 years, possessing splendid national cultural inheritance such as the Palace Museum, the Great Wall, the Site of Peking Ape-man, the Temple of Heaven, the Summer Palace, and others.

Symposium Themes

- Theoretical developments of construction management and real estate;
- Urbanization and sustainable land use;
- Project management for infrastructure and large scale construction works;
- Developments of electric power and new-energy constructions projects;
- Decision-making and optimization for construction project investment;
- Sustainable development for construction and real estate;
- Construction and property enterprises management;
- Management for building and real estate market;
- Laws and contract management for construction and real estate;
- IT applications in construction management and real estate;
- Property development and management.
