WAKING A SLEEPING GIANT:

INNOVATION AND SUSTAINABILITY IN CONSTRUCTION

Introduction

STAND-INN is a two-year EU project, running from September 2006 to October 2008, one of six networks under the Europe INNOVA programme. A pan-European consortium, drawn from 11 countries, participated in the project, with work streams for business process, products and services, sustainable housing and public procurement of construction.

The project took as its mission "to provide guidance on how standardisation supports innovation and "building smart" [and to] actively disseminate information about sustainability and BIM standards and encourage processes that create sustainable value for customers". Attendees will receive the STAND-INN

Handbook, which has been prepared as a key deliverable of the project. www.europe-innova.org

Programme

Amongst others attention is given to innovation and sustainability for the construction industry, the climate footprint of the construction sector, shaping the future of an efficient and sustainable construction industry, energy efficient construction. In addition there will be roundtable discussions, presentation to case studies, and training sessions.

The full conference leaflet with detailed programme information can be downloaded [here](#).
