

## **Actions on Structures**

### **Floor Loads in Car Parks**

#### **CIB Report ISBN 90-6363-004-2 Publication 194**

Publication 194 is the latest to be published in the well-established Series Actions on Structures. It describes static loads caused by the cars on the floors of car parks. The contents should be seen as a summary of what is believed to be most important with respect to applications of available information. It has not been the intention that the Report should include detailed information about the floor loads in car parks. Information about details of load description can to some extent be obtained from available statistics concerning the vehicles. It should be noted that the information which can be obtained from literature is very scarce and the list of references given in the Report contains only a few items.

The original draft of Publication 194 was prepared by D. Hosser, G. König and R. Rackwitz. The Report was then subjected to comprehensive and detailed discussion within the Commission.

#### **Contents**

Introduction

A Load Model for the Parking Area

General Assumptions

Spatial Variability

Temporal Variability

Load Effect

Equivalent Uniformly Distributed Load

Extreme Values

A Numerical Example

Special Unfavourable Situations

A Load for the Drive Ways

Research Needs

References

#### **Price per Copy**

CIB Members *f* 35.- (Dutch Guilders), Non-Members *f* 45.- (Dutch Guilders).

These prices include despatch by surface mail.
