

The 14th CIB World Building Congress

Gävle, Sweden
7 - 12 June 1998

The Congress Theme Construction and the Environment guarantees that the emphasis will be put squarely on all the important R&D issues that lie embedded in the concept Sustainable Development in the Built Environment.

The pursuit of sustainable development in our societies gives top priority to the built environment and the construction industry. The Congress will bring together the international experts in building and construction to further widen the frontiers of our common knowledge base and to plot the direction for the future.

Christer Sjöström
